### 3D Oil Limited

### QUARTERLY ACTIVITIES REPORT FOR THE THREE MONTHS ENDED 31 DECEMBER 2015

#### **Key Points**

VIC/P57 Sea Lion-1 exploration well drilled during October / November 2015. No commercial hydrocarbons intersected, however 3D Oil Limited financial exposure to Sea Lion-1 costs limited due to partial carry by operator Hibiscus Petroleum.

- VIC/P57 Year 3 well commitment satisfied by Sea Lion-1.
- T/49P preliminary Prospective Resource Estimates released;
  - 6.82 TCF of gas in permit (recoverable Best Estimate Prospective Resource)
  - Drill-ready Flanagan Prospect 1.38 TCF of gas (recoverable Best Estimate Prospective Resource)

### **Exploration**

#### VIC/P57, Gippsland Basin, offshore Victoria

3D Oil Limited (ASX: 'TDO') has a 24.9% interest in the VIC/P57 exploration permit in the offshore Gippsland Basin. During the quarter the Sea Lion -1 exploration well was drilled by the West Telesto jackup drilling rig. No zones of commercial hydrocarbons were encountered in the Sea Lion-1 well. No safety or environmental incidents were reported.

TDO's share of Sea Lion-1 drilling costs was largely carried by joint venture operator Carnarvon Hibiscus Pty Ltd ('CHPL') the wholly owned subsidiary of Hibiscus Petroleum.

Significant prospectivity remains in the VIC/P57 permit and the joint venture will now re-focus its technical programme towards gas exploration to potential serve the tight eastern states wholesale natural gas market.

Sea Lion-1 has satisfied the Year 3 permit commitment and as 9 January 2016 the permit has entered Year 4 for which the commitment is for geological and geophysical studies.

#### T/49P, Otway Basin, offshore Tasmania

In the T/49P permit TDO holds a 70% interest and operatorship in joint venture with Beach Energy (30%). The permit is now in Year 3 having met the Year 2 permit commitment with the acquisition and processing of the Flanagan 3D seismic survey.

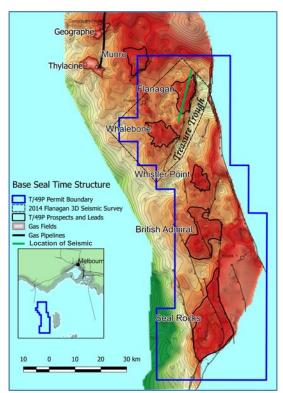

T/49P is located immediately southeast of the largest producing gas field in the Otway Basin and contains a number of prospective features for gas exploration. It covers an area of 4,960 km² in water depths generally no greater than 100m. The north of the permit is now covered by 974 km² of modern 3D seismic, while the area to the south remains lightly explored covered by a broad grid of 2D seismic data of varying vintages. Only two early exploration wells have been drilled in the permit (in 1967 and 1970) and the region has largely been overlooked by the industry despite the proximity of the Thylacine and Geographe producing gas fields.

TDO's view of the potential for gas discoveries in this permit has been strongly supported by the new 3D seismic data which significantly improves prospect imaging and provides greater detail of the geology. Good indications of reservoir and seal units analogous to the neighbouring Thylacine and Geographe fields are evident from the data. Within this region gas accumulations are typically associated with seismic amplitude anomalies, including at Thylacine and Geographe. TDO has identified similar seismic amplitude anomalies on the Flanagan 3D seismic data set. These amplitude anomalies increase the prospectivity for gas, particularly within the Flanagan Prospect area, although the extent to which these anomalies indicate the presence of gas will be the focus of further interpretation and analysis.

During the quarter TDO released an updated preliminary Prospective Resource assessment incorporating the results of the company's 2014 Flanagan 3D seismic survey in the northern area of the permit.

| T/49P Prospective Resource Estimate (TCF) Recoverable Gas |             |      |      |       |
|---|-------------|------|------|-------|
| Location  | Status      | Low  | Best | High  |
| Flanagan  | Prospect    | 0.41 | 1.38 | 2.68  |
| Whalebone   | Strong Lead | 0.38 | 1.20 | 2.72  |
| Munro (T/49P Part)  | Lead        | 0.04 | 0.19 | 0.57  |
| Whistler Point  | Lead        | 0.19 | 0.93 | 1.88  |
| British Admiral   | Lead        | 0.17 | 0.54 | 3.22  |
| Seal Rocks  | Lead        | 0.28 | 2.59 | 10.64 |
| T/49P Total   |             | 1.47 | 6.82 | 21.71 |

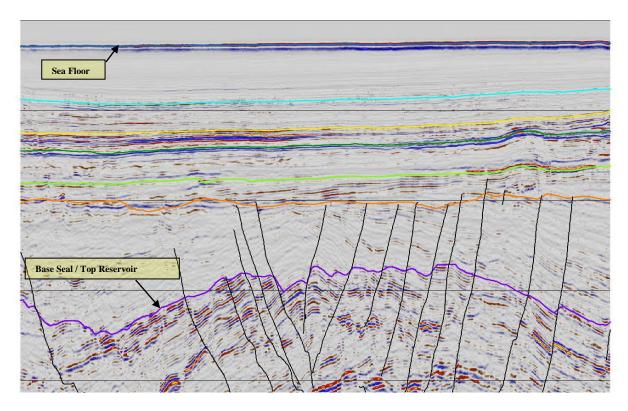

The ongoing focus of activities is on the Flanagan structure which is a ready to drill prospect and is considered to be an analogue, albeit larger, to the adjacent Thylacine gas field. Flanagan's Best Estimate Prospective Resources are currently estimated at 1.38 TCF (Trillion cubic feet) recoverable gas. At production start-up Thylacine and Geographe combined were expected to produce 0.95 TCF raw gas and as such TDO believes that Flanagan represents a very attractive drilling target in terms of size and likelihood of success.

Updated T/49P prospects and leads showing nearby Otway Basin gas fields

T/49P has significant resource potential beyond the Flanagan Prospect, with an additional 5 leads identified and mapped across the whole permit, as shown on the map on Page 4, and as listed in the table below. The permit has the potential to become a substantial new gas province which could provide a valuable contribution to the east coast gas market. As recently reported by Energy Quest, a leading energy advisory firm, the Australian east coast gas market is one of the few energy markets in the world without substantial over-capacity.

Thylacine and Geographe also contain condensate of significant economic value – initial expected production was 12 MMbbl condensate – as well as associated LPG. TDO estimates that the Flanagan prospect and other T/49P features may have similar condensate content in any gas accumulations thereby enhancing commercial viability and value of any discoveries. For example, by analogy and on a best estimate basis, the Flanagan Prospect could potentially contain 16.5 MMbbl of associated condensate and T/49P could total over 80 MMbbl of associated condensate based on Current Prospective Resource estimates for gas.

Seismic line through **Flanagan Prospect** (see map for location). Crest of the structure is approximately 2000m below sea level. Note low amplitude section indicative of seal facies overlying high amplitudes in potential reservoir section.

TDO is well positioned to farmout with a large interest and operatorship. The company now intends to utilise the positive results of the Flanagan survey and the compelling resource potential of Flanagan and the permit to attract the best possible farmin terms for future exploration drilling and seismic in this highly prospective gas exploration area. Priority will be given to ensure the drilling of the Flanagan Prospect as soon as practically possible.

#### Qualified Petroleum Reserves and Resources Evaluator Statement

The Prospective Resources estimates in this release are based on, and fairly represent, information and supporting documents prepared by, or under the supervision of, Dr Chris Pike who is employed full-time by 3D Oil as a Senior Geophysicist. Dr Pike holds a Ph.D. Geophysics and has more than 25 years practising in Petroleum Geophysics. He is a member of the Petroleum Exploration Society of Australia, the American Association of Petroleum Geologists (AAPG - US), the Society of Exploration Geophysicists (SEG – US), the Association of Professional Engineers and Geoscientists of Alberta (APEGA - Canada) and the Professional Engineers and Geoscientists of Newfoundland and Labrador (PEGNL - Canada). Dr Pike is qualified in accordance with ASX listing rule 5.41 and has consented in writing to the inclusion of the information in the form and context in which it appears.

#### **Prospective Resources**

The estimates have been prepared by the company in accordance with the definitions and guidelines set forth in the Petroleum Resources Management System, 2011 approved by the Society of Petroleum Engineer. Prospective Resource estimates are for recoverable volumes and unless otherwise stated this report quotes Best Estimates and gross joint venture volumes. The estimates are unrisked and have not been adjusted for both an associated chance of discovery and a chance of development.

### **TDO Petroleum Tenement Holdings**

As at 31 December 2015, TDO petroleum tenement holdings were:

| Tenement and Location                            | TDO beneficial interest at 30Sep15 | Beneficial interest acquired / (disposed) | TDO beneficial interest at 31Dec15 |

**Director and Company Secretary** 

Print name: MELANIE LEYDIN

#### **Notes**

- The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
- Accounting Standards ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
